Electrical Lineworker Certificate Program

Dona Aña Community College (DACC), Las Cruces, NM

New Mexico's electric cooperatives and others that perform electrical line work often find it difficult to fill vacancies.

DACC's Electrical Lineworker Program is a one-year pre-apprenticeship certificate program designed to provide students with the technical background and skills necessary for careers in the installation and maintenance of electrical power cables.

For more information, contact the Doña Ana Community College Electrical Lineworker Program at (575) 527-7590.

Central NM Community College (CNM)
Rio Rancho, NM

This 15-week course is intended to introduce students to the fundamentals of basic electricity, proper pole climbing techniques, proper use and care of personal protective equipment, safe work practices, basic knowledge of the function of the power grid and general knowledge necessary for a career in the electrical linework industry.

The course combines classroom time and field work in the outdoor lab at the CNM Rio Rancho campus with a strong emphasis on outdoor lab work.

Students will receive training necessary to obtain a Class-A Commercial Driver's License and will be required to obtain their Class-A CDL as a prerequisite to receiving program certification.
