Prioritize your health with a Gastrointestinal Screening

**Upper Endoscopy (EGD) and Lower Endoscopy (Colonoscopy)
Offered at Cibola General.**

Upper endoscopy – An upper endoscopy can help identify gastroesophageal reflux disease (GERD), ulcers, cancer, precancerous abnormalities, and celiac disease, among other conditions.

Lower endoscopy – (Colonoscopies) can detect conditions like colitis, inflammatory bowel disease and diverticulosis. But mainly, doctors are looking for precancerous or cancerous colon polyps, which are growths on the inside of the colon's lining.
