

Set Up Your SmartHub Account Now to Access New Services Online

Already have an email address on file? Continental Divide will pre-enroll you!

Later this spring, you'll be able to use SmartHub to report outages, make street light trouble calls and connect with us on other account matters – all from the comfort of your smartphone or computer keypads!

The new SmartHub features compliment our new Outage Management System (OMS), which we'll be launching in April.

While the OMS software enables us to notify you by text message when outages occur and when you can expect power to be restored, the new SmartHub offerings allow you to more directly reach us, as opposed to a telephone call, an email or Google message.

You can access SmartHub directly from our website as well as download the app to your phone or tablet from the Google and Apple sites. Either way, simply register as a new user by typing in your Continental Divide account number, your last name and an email address. Click submit and wait for our confirmation email, which will allow you to create your SmartHub password.
